

Luis Felipe Ribeiro Vieira

vrluis157@gmail.com | Goiânia

Professional Summary

Mid Full-stack Engineer with 4+ years of experience developing scalable web applications and customer-facing products. Skilled in JavaScript, PostgreSQL, and RESTful API development with expertise in building responsive and dynamic front-end solutions. Proven track record in collaborative debugging and maintaining code quality standards while working in small collaborative teams on meaningful projects.

Technical Skills

Languages: JavaScript, HTML, CSS, Python, Golang, Java, Elixir, SQL

Databases: PostgreSQL

General: RESTful API Development, Full-stack Development, Testing and Debugging, Code Reviews, Remote Work Capabilities, Self-directed Work, Problem Solving, Third-party Service Integration, Continuous Learning, Growth Mindset, Microservices Architecture, API Development

Frameworks: Svelte, .NET, Grails

Tools: Git, Docker

Cloud: AWS, Google Cloud Platform, Azure

Professional Experience

Software Engineer — SHOPNOMIX

Jul 2025 – Present

- Develop scalable web applications using JavaScript and Elixir, implementing responsive and dynamic front-end solutions with Svelte framework
- Build and maintain RESTful APIs for video processing automation, integrating third-party services and optimizing data flow pipelines
- Collaborate with small collaborative team on meaningful projects, contributing to code reviews and maintaining code quality standards
- Implement full-stack development solutions combining backend API development with user-friendly interfaces for customer-facing products
- Optimize application performance and debugging processes, ensuring seamless auto-deploy to staging and production environments

Software Engineer — ZETTI TECH

Mar 2025 – Jul 2025

- Develop microservices architecture using Golang and .NET, implementing RESTful API development with SQL Server integration

- Collaborate on code reviews and debugging processes, maintaining high code quality standards across development team
- Integrate Docker and Kubernetes for containerized deployments, contributing to continuous iteration and technical best practices

Software Engineer — FITBANK

Feb 2024 – Mar 2025

- Contributed to customer-facing products for J.P. Morgan receivables anticipation system, implementing full-stack development with Golang and Java
- Built RESTful APIs and data processing pipelines using PostgreSQL, collaborating on collaborative debugging and problem solving initiatives
- Developed automated testing and debugging solutions with Python and Selenium, enhancing user experience and system reliability
- Implemented cloud-based solutions across AWS, Azure, and Google Cloud Platform, optimizing scalable web applications for enterprise clients

Security Analyst — 3DB.CLOUD

Apr 2023 – Mar 2024

- Maintained cloud infrastructure across AWS, Azure, and Oracle Cloud, implementing security best practices and continuous monitoring
- Collaborated with development teams on vulnerability assessments and code quality improvement initiatives

Education

Bachelor's Degree Software Engineering — FACULDADE ANHANGUERA

2022 – 2025
